Miroslaw Mus

Graduate Software Engineer | Python · Java · React · APIs · Cloud

London, UK | +447397001967 | Miroslaw.K.Mus@gmail.com | Portfolio | LinkedIn | GitHub

First-Class Computer Science graduate specialising in backend engineering and distributed systems, with hands-on experience building production ready APIs, containerised services, and concurrent systems in Python and Java. Proven ability to design, deploy, and own systems end to end, from architecture through to CI/CD, in fast paced and self-directed environments.

AREAS OF EXPERTISE

Python · Java · REST APIs · Distributed Systems · SQL · Docker · AWS · Git · CI/CD · Object-Oriented Programming · Unit Testing · Debugging · Performance Optimisation · Flask · JavaScript · Networking (TCP/IP) · Agile Development · Machine Learning · Data Processing

KEY ACHIEVEMENTS

- Built a multimodal machine learning system integrating speech and text pipelines, achieving 99%+ accuracy and improving classification performance by ~10%
- Designed and deployed a Python backend service with REST APIs, containerised using Docker and automated through CI/CD pipelines
- Developed a full-stack AI chatbot integrated into a live portfolio using React and serverless functions on Vercel, enabling real-time interaction via OpenAI API

PROJECTS

AI Portfolio Chatbot Website Mar 2026

WWW: https://github.com/Mireqq/portfolio/tree/main

Tech stack: React, JavaScript, Serverless Functions, REST APIs, Vercel

- Designed and developed a full-stack portfolio application featuring an AI-powered chatbot that provides real-time responses about projects, skills, and experience
- Implemented a serverless backend using Vercel Functions to handle API requests and integrate with the OpenAI API for dynamic conversational responses
- Built a responsive React frontend with asynchronous data handling and enhanced UX features including typing animations and real-time interaction

Real-Time Multimodal Depression Severity Classifier Mar 2025

WWW: https://github.com/Mireqq/Multimodal_dep_class/tree/main/Dep_det-main

Tech stack: Python, Flask, Docker, REST APIs, CI/CD

- Designed and implemented a multimodal machine learning pipeline integrating speech and text models for real-time depression severity classification
- Built a Flask-based REST API backend enabling real-time interaction with machine learning services, deployed via Docker and automated CI/CD pipelines.
- Implemented secure data processing architecture with encrypted pipelines and HTTPS endpoints, aligning with GDPR/HIPAA requirements
- Deployed the application using Vercel with environment variable management and automated CI/CD through GitHub integration

Real-Time Multi-Client Java Chat Application Feb 2025

WWW: https://github.com/Mireqq/java-chat-app

Tech stack: Java, TCP/IP, Multithreading

- Designed and implemented a concurrent multi-client server using TCP sockets and multithreading, handling dynamic client connections and real-time state transitions reliably

- Built a modular client-server architecture with fault tolerance and error handling, ensuring consistent behaviour under concurrent load
- Automated build and integration testing via Azure Pipelines, improving code consistency and reducing manual overhead
- Documented architecture, networking logic, and setup to support future scalability and onboarding

EDUCATION

University of Greenwich **London, UK**
BSc (Hons): Computer Science Jan 2022 – Jun 2025
Relevant modules: Algorithms & Data Structures, Advanced Programming, Operating Systems, Distributed Systems, Software Engineering, Machine Learning, Computer & Communication Systems.

PROFESSIONAL EXPERIENCE

Warehouse Operative **London, UK**
Co-op August 2017 – Present

- Worked with WMS/ERP systems to identify and resolve data inconsistencies, improving inventory accuracy by 15%
- Diagnosed and resolved technical issues with scanning devices and internal systems, reducing downtime by 25%

Assistant Manager **London, UK**
Costa Coffee October 2016 – August 2017

- Supervised daily store operations and a team of staff, ensuring smooth workflows and high customer satisfaction
- Delivered first-line troubleshooting of POS systems and store IT equipment, minimising downtime during service

IT Support Engineer **Poland**
Mircom Computers October 2015 – October 2016

- Delivered 1st and 2nd line technical support across Windows, Linux, and virtualised environments, troubleshooting system, network, and application issues in production environments
- Provided 2nd line support for virtualised environments, supporting Azure and AWS virtual machines and VMware, gaining hands-on exposure to system administration and solution deployment
- Administered Active Directory (users, groups, permissions) and Microsoft 365 (M365), including access policies and security configurations, ensuring secure and reliable system operations
- Performed Windows support, patch management, software installations, and system hardening, reducing downtime by 15% across end-user devices
- Supported internal infrastructure including DNS, DHCP, VPN, and networking for hybrid office and remote teams, ensuring stable and secure connectivity

CERTIFICATES

CompTIA A+ · AWS Certified Cloud Practitioner (expected 2026) · Microsoft Azure Fundamentals (expected 2026)
Full UK Driving Licence
