Miroslaw Mus

Graduate Software Engineer | Python · Distributed Systems · APIs · Cloud Infrastructure

London, UK | +447397001967 | Miroslaw.K.Mus@gmail.com | LinkedIn | Github

First-Class Computer Science graduate with experience building backend and distributed systems using Python, Java, REST APIs, and Docker. Skilled in designing scalable services and concurrent systems, with a strong foundation in algorithms, operating systems, and distributed computing. Passionate about building reliable software and solving complex engineering problems.

AREAS OF EXPERTISE

Python · Java · REST APIs · Distributed Systems · SQL · Docker · AWS · Git · CI/CD · Object-Oriented Programming · Unit Testing · Debugging · Performance Optimisation · Flask · JavaScript · Networking (TCP/IP) · Agile Development · Machine Learning · Data Processing

KEY ACHIEVEMENTS

- Built a multimodal machine learning system integrating speech and text pipelines, achieving 99%+ accuracy while improving classification performance by ~10%
- Designed and deployed a Python backend service with REST APIs, containerised using Docker and automated through CI/CD pipelines
- Developed a multi-client real-time messaging system using Java concurrency and socket networking
- Improved operational workflows in ERP/WMS systems, increasing inventory accuracy by 15%

PROJECTS

Real-Time Multimodal Depression Severity Classifier
WWW: https://github.com/Mireqq/Multimodal_dep_class/tree/main/Dep_det-main

- Designed and implemented a multimodal machine learning pipeline integrating speech and text models for real-time depression severity classification
- Built a Flask-based REST API backend enabling real-time interaction with machine learning services, deployed via Docker and automated CI/CD pipelines.
- Implemented secure data processing architecture with encrypted pipelines and HTTPS endpoints, aligning with GDPR/HIPAA requirements

Real-Time Multi-Client Java Chat Application
WWW: https://github.com/Mireqq/java-chat-app

- Developed a multi-threaded Java server handling concurrent client connections using TCP socket networking
- Created an interactive Java Swing GUI client with real-time message rendering and error-handling for a smoother user experience
- Implemented modular OOP architecture and CI automation via Azure Pipelines, improving maintainability and build consistency
- Documented architecture, setup, and networking logic, supporting future scalability and collaboration
- Designed server logic to manage dynamic client roles and state transitions in real time, ensuring reliable system behaviour as clients connected and disconnected

EDUCATION

University of Greenwich **London, UK**
BSc (Hons): Computer Science Jan 2022 – Jun 2025
Relevant modules: Algorithms & Data Structures, Advanced Programming, Operating Systems, Distributed Systems, Software

Engineering, Machine Learning, Computer & Communication Systems.

PROFESSIONAL EXPERIENCE

Warehouse Operative **London, UK**
Co-op August 2017 – Present

- Worked with WMS/ERP systems supporting operational workflows and improving inventory data accuracy by 15%
- Delivered scanning equipment support and technical troubleshooting, reducing device-related downtime by 25%
- Worked with internal systems and technical teams to diagnose operational issues and improve system workflows

Assistant Manager **London, UK**
Costa Coffee October 2016 – August 2017

- Supervised and coordinated daily store operations, managing a team of staff to ensure smooth workflows and high customer satisfaction
- Trained and coached new employees on processes, compliance, and customer service, improving staff performance and reducing errors
- Monitored KPIs, handled scheduling, and ensured resources were allocated efficiently to meet business demands
- Delivered first-line troubleshooting of POS systems, payment devices, and store IT equipment, ensuring minimal downtime during service
- Maintained compliance with health & safety, data protection, and company policies
- Acted as escalation point for customer issues, demonstrating clear communication and problem-solving in high-pressure situations

IT Support Engineer **Poland**
Mircom Computers October 2015 – October 2016

- Delivered 1st and 2nd line technical support across Windows, Linux, and virtualised environments, troubleshooting system, network, and application issues in production environments
- Provided 2nd line support for virtualised environments, supporting Azure and AWS virtual machines and VMware, gaining hands-on exposure to system administration and solution deployment
- Administered Active Directory (users, groups, permissions) and Microsoft 365 (M365), including access policies and security configurations, ensuring secure and reliable system operations
- Performed Windows support, patch management, software installations, and system hardening, reducing downtime by 15% across end-user devices
- Supported internal infrastructure including DNS, DHCP, VPN, and networking for hybrid office and remote teams, ensuring stable and secure connectivity
- Created technical documentation, SOPs, and user training materials to support Service Desk operations, reducing recurring support queries by 20%

CERTIFICATES

CompTIA A+ · AWS Certified Cloud Practitioner (in progress) · Microsoft Azure Fundamentals (in progress)

Udemy Coursework: HTML · CSS · JavaScript · Java

Full UK Driving Licence
