

Miroslaw Mus

Graduate Software Engineer | Python · Java · REST APIs · Cloud · AI

London, UK | +447397001967 | Miroslaw.K.Mus@gmail.com | [Portfolio](#) | [LinkedIn](#) | [GitHub](#)

First-Class Computer Science graduate who built three deployed software applications using Python, Flask, Docker and the OpenAI API while working full-time throughout the entire degree. Specialises in backend systems, REST APIs and AI-powered services, with additional IT support experience covering cloud infrastructure, networking and enterprise operations. Seeking a graduate software engineering role where I can contribute to scalable, reliable software from day one.

KEY ACHIEVEMENTS

- Graduated First-Class Honours (1:1) in Computer Science while working full-time throughout the entire degree.
- Built three deployed software applications in Python, Java and React, integrating OpenAI API, Docker, CI/CD and cloud platforms.
- Improved inventory accuracy by 15% and reduced operational downtime by 25% through data investigation and system troubleshooting at Co-op.
- Developed a real-time multimodal ML classifier combining speech and text pipelines, deployed via Flask REST APIs and Docker.

TECHNICAL SKILLS

Programming: Python (proficient), Java (proficient), JavaScript, SQL

Backend and APIs: Flask, REST APIs, Serverless Functions, API Integration, OpenAI API

Cloud and DevOps: Docker, CI/CD, GitHub Actions, Azure Pipelines, Vercel, Linux, AWS/Azure exposure

Machine Learning and AI: Generative AI, Large Language Models, Multimodal ML, Machine Learning, Data Processing

Systems and Networking: TCP/IP, Distributed Systems, Multithreading, Client-Server Architecture, Active Directory, DNS, DHCP, VPN

Testing and Tools: Git, Postman, Unit Testing, API Testing, Debugging, Agile Development

EDUCATION

University of Greenwich

London, UK

BSc (Hons) Computer Science - **First Class Honours (1:1)**

Jan 2022 - Jun 2025

Relevant modules: Algorithms and Data Structures, Advanced Programming, Operating Systems, Distributed Systems, Software Engineering, Machine Learning, Computer Networks, Database Systems.

Technologies used throughout degree: Python, Java, SQL, Docker, Flask, Git, Linux, REST APIs.

Final Year Project: **Real-Time Multimodal Depression Severity Classifier.**

PROJECTS

AI Portfolio Chatbot Website

Mar 2026

GitHub: github.com/Mireqq/portfolio/tree/main

Tech stack: React, JavaScript, Serverless Functions, REST APIs, Vercel, OpenAI API

- Built a full-stack portfolio website featuring an AI-powered chatbot that answers questions about projects, skills and experience in real time, deployed to production on Vercel.
- Implemented serverless backend functions integrating the OpenAI API, handling dynamic request routing, response generation and error management.
- Developed a responsive React frontend with asynchronous API communication, connecting the user interface directly to backend serverless functions.

Real-Time Multimodal Depression Severity Classifier

Mar 2025

GitHub: github.com/Mireqq/Multimodal_dep_class/tree/main/Dep_det-main

Tech stack: Python, Flask, Docker, REST APIs, CI/CD, Machine Learning

- Developed a multimodal ML application combining speech and text processing pipelines for real-time classification, outperforming single-modality baselines.
- Designed Flask REST APIs enabling communication between machine learning models and client-facing application components, reducing integration complexity.
- Containerised the application using Docker and implemented CI/CD pipelines, cutting manual deployment steps and ensuring reproducible builds across environments.

Real-Time Multi-Client Java Chat Application

Feb 2025

GitHub: github.com/Mireqq/java-chat-app

Tech stack: Java, TCP/IP, Multithreading, Azure Pipelines

- Designed and implemented a concurrent TCP/IP client-server application supporting multiple simultaneous users through a multithreaded server architecture.
- Developed connection management, error handling and message routing to improve reliability and communication flow under concurrent load.

- Applied distributed systems and networking principles to manage state, concurrency and fault tolerance; automated build workflows using Azure Pipelines.

TECHNICAL EXPERIENCE

IT Support Engineer

Mircom Computers

Poland

October 2015 - October 2016

- Delivered 1st and 2nd line technical support across Windows and Linux environments, diagnosing and resolving hardware, software and networking issues.
- Administered Active Directory, Microsoft 365, DNS, DHCP and VPN to maintain secure and reliable operations for business clients.
- Supported Azure, AWS and VMware environments, gaining practical exposure to cloud infrastructure, virtualisation and enterprise IT operations.
- Maintained clear communication with non-technical users while investigating and escalating complex technical incidents.

OTHER PROFESSIONAL EXPERIENCE

Warehouse Operative (Operations)

Co-op

London, UK

August 2017 - Present

- Investigated operational data issues using warehouse management and ERP systems, identifying discrepancies that improved inventory accuracy by 15%.
- Led troubleshooting of handheld scanning devices and internal software systems, reducing operational downtime by 25% and enabling uninterrupted logistics workflows.
- Worked within a highly automated logistics environment requiring accurate use of enterprise software, process monitoring and rapid problem resolution under time pressure.

Assistant Manager

Costa Coffee

London, UK

October 2016 - August 2017

- Supervised daily store operations and a team of staff, coordinating workflows to maintain high service standards during peak periods.
- Delivered first-line troubleshooting of POS systems and store IT equipment, minimising downtime and communicating technical issues clearly to non-technical colleagues.
- Developed communication, organisation and team coordination skills directly transferable to collaborative engineering environments.

ADDITIONAL INFORMATION

Languages: English (fluent), Polish (native)

Self-development: Actively pursuing AWS Solutions Architect Associate certification to formalise cloud knowledge; follows developments in open-source ML tooling and LLM application patterns.
